## Summer Data Scientist Intern at Algorithm Research Group

AOL

### Antje Dittmer

Senior Technical Consultant

“ Wei worked this summer in the Algorithm Research group of AOL Platform's advertising.com, reporting to me. He worked on investigating possibilities to improve a latency prediction algorithm for online advertisement conversions. Additionally, he helped with profiling and modeling of online advertisement data for a different project. He succeeded in finishing the work assigned to him for both projects very successfully in the three months he was working on our team. His code and data models will be used as basis for further development.

Wei has a solid engineering background, and is working in his PhD thesis on supply system management. His practical experience in very different areas as well as his good theoretic knowledge of machine learning, statistics and optimization enables him to very quickly understand new concepts, to see possible areas of improvements and to implement his ideas very efficiently.

Wei worked very independently, but he also always took feedback into account, making sure that his work was aligned with the team's goals. He is very thorough, very smart, very dedicated, and was simply great to work with. **less** ”

August 26, 2014, Antje managed Wei at AOL

### Niklas Karlsson

Vice President, R&D at AOL Platforms

“ Wei was a summer intern in the Algorithm Research team at AOL Platforms R&D in 2014 and worked successfully on an important and challenging research problem related to recursive latency estimation of advertising data. It was a very pleasurable and productive experience to have Wei be part of the team. He demonstrated a sharp mind, high integrity, and excellent social skills. He fearlessly took on and systematically developed a promising latency estimation algorithm. In parallel he supported the research team in data modeling for an unrelated but also important project. Wei is intelligent, detail oriented, and hard working but at the same time very personable. **less** ”
